TB patients in the country

1863. SHRI K. RAMA MOHAN A RAO: Will the Minister of HEALTH AND FAMILY WELFARE be pleased to state:

(a) the number of T.B. patients in the country, State-wise;

(b) the number of infections (T.B.) reported in the last five years, year-wise and State-wise;

(c) the number of people died due to T.B. in the last five years, year-wise and State-wise;

(d) whether it is a fact that the WHO has expressed its dis-satisfaction over the T.B. and Polio eradication programme in the country; and

(e) if so, the reasons for failure in the above programmes?

THE MINISTER OF STATE IN THE MINISTRY OF HEALTH AND FAMILY WELFARE (SHRIMATI PANABAKA LAKSHMI): (a) and (b) The information regarding exact number of TB patients in the country, State-wise as well as the number of infections in the last five years is not available. However, it is estimated that about 40% of the population is infected by TB bacillus. Out of the infected people only 10% are prone to develop TB disease. A Statement-I indicating State-wise number of TB cases detected and put on treatment under the Programme during last 3 years is annexed (See below).

(c) The exact number of people died due to TB is not available. However, it is estimated that about 4.17 lakh patients die of TB every year in the country. The State-wise details of deaths reported due to TB among patients registered for treatment under Revised National TB Control Programme (RNTCP) covered areas during last 5 years are given at Statement-I I (See below).

(d) and (e) No, Sir government of India — WHO joint monitoring mission comprising international experts evaluated the RNTCP in September 2003 and applauded RNTCP as one of the fastest expanding public health/aisease control programme in the history and also for maintaining high levels of treatment success. WHO has expressed its satisfaction on the achievement on polio eradication programme in the country and appreciated the progress made in limiting the wild polio virus circulation during 2004.

Statement-I

State-wise number of TB cases detected and put on treatment during the last three years.

- The proportion of number of patients put on treatment under RNTCP and the TB deaths occurring has been same, but the number has increased due to increased coverage of population under RNTCP.
- As treatment outcome (death, success rate etc.) becomes available only after one year from initiation of the treatment, the information in regard to TB deaths in 2003 is available only upto March, 2003.
